Title: Governing Human–AI Collaborative Project Workflows in Multi-Platform Digital Delivery: A Design Science Study of Auditable Handoffs and Idempotent Release Operations

Author: HuaiCheng Sheng (Agentic Work Lab, Hangzhou Chengxin Holding Group Co., Ltd., Hangzhou, Zhejiang, China | ORCID: `0009-0003-2900-6377`)

Highlights

- Four-layer stage-gate architecture governs human-AI project handoffs.
- Idempotent receipt state machine blocks duplicate releases on timeout.
- Cryptographic plan-hash and SHA-256 gates lock 30 release artifacts.
- Post-submit confirmation waits consume 92.32% of browser release time.
- Epistemic audit rules separate cohort metrics (N=55) from causation.

Strict Character-Count Verification Table (Elsevier Maximum: 85 Characters Including Spaces)

#	Highlight Bullet	Char Count	Compliance
1	`Four-layer stage-gate architecture governs human-AI project handoffs.`	**69 / 85**	PASS (≤ 85 chars)
2	`Idempotent receipt state machine blocks duplicate releases on timeout.`	**70 / 85**	PASS (≤ 85 chars)
3	`Cryptographic plan-hash and SHA-256 gates lock 30 release artifacts.`	**68 / 85**	PASS (≤ 85 chars)
4	`Post-submit confirmation waits consume 92.32% of browser release time.`	**70 / 85**	PASS (≤ 85 chars)
5	`Epistemic audit rules separate cohort metrics (N=55) from causation.`	**68 / 85**	PASS (≤ 85 chars)
